

# Touch will never be the same again

*New 19" CRT  
Chassis touchmonitor with iTouch  
for gaming applications*

Touchscreens for CRT-based games have always been exactly that: a glass-based touchscreen that sits between your game and the player. Elo TouchSystems' breakthrough touch technology, iTouch, takes that barrier away enabling a new generation of games and greater player attraction.

Playability? Players love the light touch, lightning-fast operation and accuracy of iTouch. Without the overlay, the brilliance of your graphics show through completely and players aren't distracted by added reflections or fuzzy anti-glare coatings.

Reliability? iTouch continues to operate with dirt and scratches and Elo's unique watertight minibezel is included to stop spills. Moreover, iTouch CRTs are much stronger than any overlay, even if bonded.

Integration? Elo provides all of this to you in a single touchmonitor solution at a competitive price. No more separate sourcing of touch components and displays and in-house or outsourced integration.

Indeed, touch will never be the same again...
