

Prize technology, price bonus

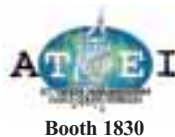

Elo continues to expand its gaming touchmonitor line, designed from the ground up for ruggedness and reliability.

Elo LCDs insulate you from panel changes because the enclosures are controlled by Elo's design specifications. All feature IntelliTouch "pure glass" surface wave technology, known for its fast, precise touch performance which never needs recalibration. IntelliTouch is also the best possible choice when it comes to image quality. Without any metallic coatings, brightness is maximized, reflection is minimized, and the colours of your graphics are not altered.

For CRTs, Elo completely eliminates the touchscreen overlay with iTouch touch-on-tube technology. The results are striking - the monitor's original brightness, colour, and picture quality are preserved, and reflections are reduced up to 80%.

All Elo gaming monitors feature an integrated minibezel with watertight seal and worldwide agency approvals. Elo custom monitors have met over 30 international gaming standards.

High performance LCDs and CRTs, packed with features, and the quality shows in every detail.

Elo. Your best bet.
