

Why are game manufacturers choosing Elo's iTouch?

The next generation of touchscreen games is hitting the market, setting new standards for player experience. Elo touchmonitors, using revolutionary iTouch "touch-on-tube" technology, deliver the ultimate player experience with brilliant optics and precise play.

Without touchscreen overlays, players will truly experience your breathtaking graphics. Reflections are reduced by up to 80%, so daytime and bright environ-

ments are no longer a problem. And since touches are fast, precise and without touch-averaging, two-handed players aren't frustrated. But, don't take our word for it. In blind comparative tests by our customers, players simply preferred iTouch.

Want to see with your own eyes why funworld Photo Play machines use iTouch? Come and see it at ATEI or contact us for a demonstration.
