

Elo Bartop and Tabletop Game Playing

BENEFITS:

- Touch technology operates through a flat, continuous bar or tabletop surface
- Easy to clean and maintain
- Immune to dirt and spills
- Works through any glass, including break-resistant safety glass

The Elo tabletop touch technology demonstration offers a long requested solution for touch technology on a truly flat surface. No longer does the touchmonitor need to be recessed in the bartop, creating a trap for liquids and dirt. In addition, there are no more difficulties accommodating a bezel around the touch-screen. The new Elo touch technology solves these problems and allows a bartender or waiter to clean the playing surface as easily as an ordinary tabletop.

The touch function is completely unaffected by spills and dirt. And for the players, the touch is sensitive, precise, and drift-free—as you would expect from Elo.

The new Elo technology operates through your choice of glass, including 1/2" (12 mm) break-resistant safety glass built into some bartops. Game makers are invited to contact Elo so we can design a touchmonitor solution for you.

APPLICATIONS:

- Bartop games
- Tabletop games
- Vertical AWP's
